(a) $N = 80$, local emission (dotted: mean field)
$\gamma = 0$
$\gamma = 0.02\kappa$
$\gamma = 0.1\kappa$
$m_z = \langle J_z \rangle / S$
κt
(b) lifetime, local emission (dashed: rule, dotted: MF)
$\gamma = 0$
$\gamma = 0.02\kappa$
$\gamma = 0.05\kappa$
$\gamma = 0.1\kappa$
$\gamma = 0.2\kappa$
$\gamma = 0.5\kappa$
$\kappa\tau$
N
(c) all rates and N
τ/τ_{MF}
$x/(1+x)$
local emission
local dephasing
$x = \tau(N, 0)/\tau_{\mathrm{MF}}$
(d) deviation from the rule (lines: fixed rate, N grows)
$\tau/\tau_{\mathrm{rule}} - 1$ [%]
$x = \tau(N, 0)/\tau_{\mathrm{MF}}$
